

Brant Simpson

SOFTWARE DEVELOPER & CYBERSECURITY ENGINEER

Ohio, USA | 234-283-8642 | brant@brantsimpson.com | brantsimpson.com | github.com/Brant-100

TECHNICAL SKILLS

LANGUAGES	Python · TypeScript · JavaScript · SQL · HTML5 · CSS3
FRAMEWORKS	React · Next.js · FastAPI · Django · Tailwind CSS · Prisma · NextAuth.js
SECURITY	MITRE ATT&CK mapping · C2 development · AES-GCM cryptography · network reconnaissance · threat detection · network hardening
INFRASTRUCTURE	Docker · GitHub Actions (CI/CD) · pytest · SQLite · PostgreSQL · Git
PRACTICE	Agile / Scrum sprints · Lean Six Sigma (DMAIC) · technical documentation

EXPERIENCE

2026

Independent

Sole Developer — Project Nexus

Self-directed SaaS build of a modular command-and-control framework, engineered from primitive socket and crypto operations with no off-the-shelf tooling so every layer is explainable and defensible.

- Built a FastAPI operator server with JWT-authenticated REST, AES-GCM per-session encrypted comms, and jittered proxy-aware beaconing.
- Implemented WAL-mode SQLite persistence with an append-only JSONL hash chain for tamper-evident operator logs.
- Mapped 18 MITRE ATT&CK techniques across 17 task handlers; shipped with GitHub Actions CI and Docker Compose deployment.

2026

Business Professionals of America

Web Application Developer — SkillSwap

Co-developed a peer-to-peer learning platform for a BPA competitive web-application entry, delivered mobile-first and on deadline through Agile sprints.

- Full-stack development on Next.js 15, React 19, TypeScript, Prisma, and PostgreSQL with Google and GitHub OAuth via NextAuth.js.
- Integrated an OpenAI layer for résumé-based skill extraction and session recommendations, designed to degrade gracefully when the API is unavailable.

2025

Business Professionals of America

Web Application Team Member — Health Hive

Shipped a Django team-wellness platform where groups log activities, collaborate on goals, and stay accountable through reminders and progress analytics.

- Contributed across templates and UX polish and integrated features with the team's shared data model and workflows.
- Coordinated delivery through Agile sprints tracked in Trello with a four-person team.

SELECTED PROJECTS

Network Scanner

Python · Open source

Multithreaded TCP reconnaissance toolkit — CIDR ping-sweep host discovery, connect-scan port enumeration, and service banner grabbing behind a clean argparse CLI, built from raw sockets rather than wrapping nmap. Text and JSON reporting with full pytest coverage on the core scan logic.

Python

socket

threading

argparse

pytest

HealthHive

Django · Team

Team-centric wellness application that turns individual health tracking into a collaborative journey — activity logging, group management, custom reminders, and progress analytics with visual trends and team performance insights. Built on Django's MVT architecture for simple, self-hosted deployment.

Django 5.1
